<sup>a</sup> Main Valves for corrosive fluids or costly gases require special materials.

<sup>b</sup> Bronze body and blind flange only.

<sup>c</sup> Minimum Differential is the smallest permissible difference between initial pressure (measured at the inlet) and the delivery pressure (measured at the outlet) of the main valve.

<sup>d</sup> Secoweld seat construction described in Options Section is regularly furnished for service pressures 400 psi and higher.

<sup>e</sup> 17-4 PH stems are furnished for service temperatures exceeding 600°F.

<sup>f</sup> Inconel springs are furnished for service pressures exceeding 400 psi and/or temperatures exceeding 600°F.

<sup>g</sup> Standard spring (HP) requires minimum 30 PSI differential. 50 PSI is recommended minimum differential. Use optional Low ΔP (LP) main spring for 15 psi minimum differential. 10 psi minimum differential is attainable by adding base bypass and bleedport.
